

Data Loss Prevention (DLP) for Property Management

Protect your tenant data. Stay compliant. Prevent costly breaches.

Why Property Managers Need DLP

You manage:

- 
- Tenant SSNs, IDs, and contact info.
 - Bank details, lease documents, and payment records.
 - Maintenance logs and internal property data.

Without DLP, your business faces:

- Unauthorized data access.
 - Regulatory fines (GDPR, CCPA).
 - Eroded client and tenant trust.
- 

What Can Go Wrong Without DLP?

- ✗ Data leaks from email or file-sharing.
 - ✗ Exposed tenant or payment information.
 - ✗ Accidental uploads to the wrong platform.
 - ✗ Insider threats or careless employees.
 - ✗ Non-compliance with data laws.
- 

What DLP Does for Property Managers

- **Identifies and classifies sensitive data.**
- **Prevents unauthorized sharing or uploads.**
- **Tracks data movement across systems.**
- **Helps meet legal and regulatory requirements.**
- **Adds visibility and control to your operations.**

Starting a DLP Project Strategy

A successful DLP project begins with a few foundational principals:

Know Your Data

Identify the sensitive data you need to protect — like Social Security numbers, bank accounts, credit cards, physical and email addresses, and other regulated information.

Map Where Data Lives

Understand where this data should be stored — and make sure it's actually there.

Use Built-In Tools First

If your data lives in Microsoft 365 (SharePoint, OneDrive), leverage Microsoft DLP to get started fast.

Set Basic DLP Policies

Create rules that control how sensitive info is shared — like requiring approval before it's emailed externally.

Test and Tune

Run tests to ensure policies work as intended without disrupting workflows.

Train Your Team

Educate users so they understand how to work within the DLP framework and why it matters.

Pro Tip: For companies already using Microsoft 365, Microsoft DLP is often the fastest, most integrated solution to begin with.

Secure Your Data Before It Walks Out the Door

DLP isn't just IT security — it's good business.

A Managed IT Services Provider like IronEdge can help! We're here to help protect your property management company from data loss.
