The IronAI™ Data Journey

How IronAI™ keeps your information private and protected, and in your control.

Users — **Prompts** — **LLM Models** — **IronAI™** — **Isolated Data Storage**

No LLM
SOC 2 and SOC 3
1.

From You to IronAI™ — Secure from the Start

When you create a prompt, send a message, or upload a file, your data is encrypted immediately — the same level of protection used in online banking.

- Encrypted in Transit: Everything you share travels through secure HTTPS channels.
- You Stay in Control: Only the tools or integrations you enable are used.
- Secure for Developers: API connections use token-based authentication to ensure safe integrations.

IN SHORT

Your information cannot be intercepted, exposed, or used without your permission.

2.

Inside the IronAI™ Platform — Secure Processing & Storage

IronAI™ acts as a protective middle layer between you and the AI models that process your request.

- Secure Middle Layer: IronAI™ manages your encrypted request, handles user sessions, and securely routes your prompt to the appropriate Large Language Model (LLM).
- Trusted AI Partners: Only relevant, anonymized data is shared with secure model providers such as OpenAI, Anthropic, and Google.
- Encrypted Storage: If you save your chat history, it is stored in encrypted AWS data centers in the U.S. Your data remains unreadable even if someone gained physical access to the hardware.

IN SHORT

Your data stays private, isolated, and always under your control.

3.

Multi-Layer Protection — Your Safety Net

IronAI™ follows strict, independently verified security standards to protect your business data.

- Encryption Everywhere: Data is encrypted at all times — whether in motion or stored. Strong TLS encryption prevents eavesdropping or interception.
- Strict Access Controls: Only authorized and vetted personnel can access internal systems.
- Secure Cloud Infrastructure: IronAI™ operates in a SOC 2 and SOC 3-compliant AWS environment with continuous monitoring. SOC (Service Organization Control) is a rigorous, independent auditing standard that verifies a company has strong security, privacy, and operational controls in place.
- Continuous Testing & Audits: Regular penetration tests and external security reviews ensure ongoing protection and compliance.

IN SHORT

IronAI™ provides enterprise-grade security with continuous oversight.

4.

Confidence You Can Count On

IronAI™ is built for businesses that value privacy, compliance, and control.

- Your data is encrypted.
- Your access is protected.
- Your information is never used for AI training.

**Your data.
Your control.
Always secure.**

Ready to harness the power of AI without putting your data at risk?

IronEdge's ManagedAI™ Services, IronAI™, give your organization the visibility, governance, and protection needed to use AI safely and effectively.

- Gain full visibility into which AI tools your teams are using.
- Enforce security and compliance controls automatically.
- Enable secure, approved AI access for every department.
